

Leverage open source software to modernize and transform your applications

DXC partners with Red Hat to deliver open source solutions at scale — connecting and integrating data, devices and applications across the enterprise to enable digital transformation.

DXC and Red Hat at a glance

- Partners for 20+ years, we provide a powerful synergy, with teams in 70 countries.
- DXC is a Premier Partner and Certified Provider for Red Hat.
- DXC's expertise, combined with Red Hat's open source portfolio, helps in application modernization using a managed services model.

About Red Hat

Red Hat is the world's leading provider of enterprise open source software solutions and services, using a community-powered approach to deliver reliable and high-performing Linux, hybrid cloud, container, and Kubernetes technologies. Red Hat helps customers develop cloud-native applications, and integrate, automate, secure, and manage complex environments with award-winning support, training, and consulting services. Customer benefits

Red Hat and DXC are closely aligned to build, sell and deliver a repeatable cloud platform as a service (PaaS) and software as a service (SaaS) that provides developers and IT organizations an agile means for deploying new applications on secure, scalable resources with minimal configuration and management overhead. We do this via our Application Transformation Factory for Red Hat, which modernizes and transforms applications to PaaS and SaaS environments using Red Hat technologies. The benefits include:

- **Access to technology expertise.** DXC's certified Red Hat platform specialists can help enterprises integrate and deploy applications on multiple public, private or hybrid clouds.
- **Faster time to market.** Using container technology, we accelerate application and infrastructure provisioning, which reduces the time for new projects and increases revenue opportunities for your IT and DevOps teams.
- **Improved service performance.** Containerization means developing new applications faster, with higher reliability and better performance. It also results in fewer errors, increased

scalability, and improved services in areas such as DevOps and business operations.

- **Application management services.** DXC provides a wide range of managed application services to operate complex business solutions on a large scale. Using the latest Red Hat technologies, these services are architected for enterprise-grade high availability, and include automating application builds, testing, deployment, patching and performance reporting.

Joint offerings/solutions

To help enterprises improve operational efficiencies, reduce operating expenses and transform application, DXC and Red Hat offer innovative joint solutions, including:

Modernized Apps & DevOps.

Modernized applications deliver immediate value, secure resiliency, accelerate time to market, engage employees and customers, and enable greater agility for better business outcomes. DXC and Red Hat provide the enterprise, industry and technology expertise to deliver solutions that interconnect with your application development and management life cycles and are aligned with your business operations.

400

customers using Red Hat

350+

specialists on the job

500+

trained or certified engineers

20+

year partnership

Managed container services. Build, deploy and manage containers at scale for running legacy or cloud-native enterprise applications. This fully managed service for the Red Hat OpenShift Container Platform features built-in operational management that automates the building, testing, deployment and scaling of applications.

Differentiation

The DXC and Red Hat partnership combines DXC's enterprise perspective and deep industry expertise with Red Hat's powerful open source solutions. DXC has a large global presence in cloud and enterprise applications and the ability to deliver digital transformation at scale. Customers can benefit from the synergy provided by DXC's cloud expertise and ability to host applications in our global data centers and in public clouds such as AWS and Azure, combined with Red Hat's industry-leading open-source technologies.

Through our partnership, we maintain unique resources available to our customers, including early access to Red Hat software releases. Our resources include the application transformation factory for Red Hat and the DXC Center of Expertise on Red Hat Platforms, both of which help enterprises tap into Red Hat innovations to enable rapid and flexible application deployments. DXC also provides training in Red Hat solutions, tools and approaches through a scalable training model that can include classroom or web-based training.

Our joint intellectual property and expertise in areas such as automation, mobility and cloud optimization can help you develop and deliver cost-effective solutions. Together, we employ unique capabilities that deliver trusted, proven solutions at every point of your digital transformation journey.
