

Are you ready for Microsoft Dynamics 365?

**DXC Solutions for Microsoft Dynamics 365
Readiness Review**

Taking the first step

Get a complete assessment of your current systems and a roadmap toward the future

A recent Everest market study reports over 75 percent of enterprises plan to proactively invest in the modernisation of their core business applications*.

Take your first step on the path of digital transformation and Microsoft Dynamics 365 with the DXC Microsoft Dynamics 365 Readiness Review.

This is an assessment of your current business systems, processes and your organisation's readiness to transition to the Microsoft cloud. The focus is on business risks, IT optimisation, integration, security, and new technical and operational opportunities that the complete Microsoft cloud can bring.

We review your operational and business priorities, and take into consideration the functionality requirements, technical platform and change management inherent in a transformation. We then recommend the most appropriate strategy to reach your short, medium and long-term goals. We want to ensure that you get the most value from your investment in Dynamics 365 today - with a clear road map to the future.

Your digital transformation will begin in the areas where your business can gain the most value today, and it will evolve with you into the future.

The question is: Where and how do you start?

Your journey to Dynamics 365 with DXC Technology begins with a questionnaire. Completed with your DXC account manager, the outcomes of this exercise will deliver the scope, duration and budget of your Readiness Review. The project engagement will vary depending on the size and complexity of your business.

MODERNISE FOR AGILITY

75% of enterprises plan to proactively invest to modernise applications*

Readiness Review Engagement Process

Roadmap for digital transformation

The Microsoft Dynamics 365 Readiness Review Engagement Process consists of a series of workshops and information sessions: designed to engage with stakeholders, specialists and key users to ensure the alignment of the organisational objectives with the ultimate Solution Map.

The goal of the Engagement Process is for DXC to describe the “as-is” landscape of the solution architecture and discuss a “to-be” architecture.

We will deliver a report that documents the following core areas discovered during the workshops:

- **Business Systems Environment** – current business applications and systems landscape
- **Infrastructure Readiness** – current and infrastructure architecture
- **Business Strategy** – business strategy and objectives and the role of IT within this strategy
- **Change Management** – risk analysis of the current cultural and organisational environment.

The report will detail the steps required for your business to transition to the Dynamics 365 Microsoft cloud architecture and highlight any potential roadblocks and risks.

Throughout these sessions, your team will become more familiar with Dynamics 365, its cloud functionality and terminology, new licensing model and the changes it will introduce to your business processes.

The review will enhance your understanding of your organisation’s business, operational and IT readiness for a move to the cloud and Dynamics 365.

It will also identify any gaps or areas of concern to be addressed in the resulting Solution Map.

“When our 5-year strategy is complete, we’ll be completely cloud-based with no reliance on ageing hardware with all the associated costs and teams. And we’ll be a highly disciplined business.

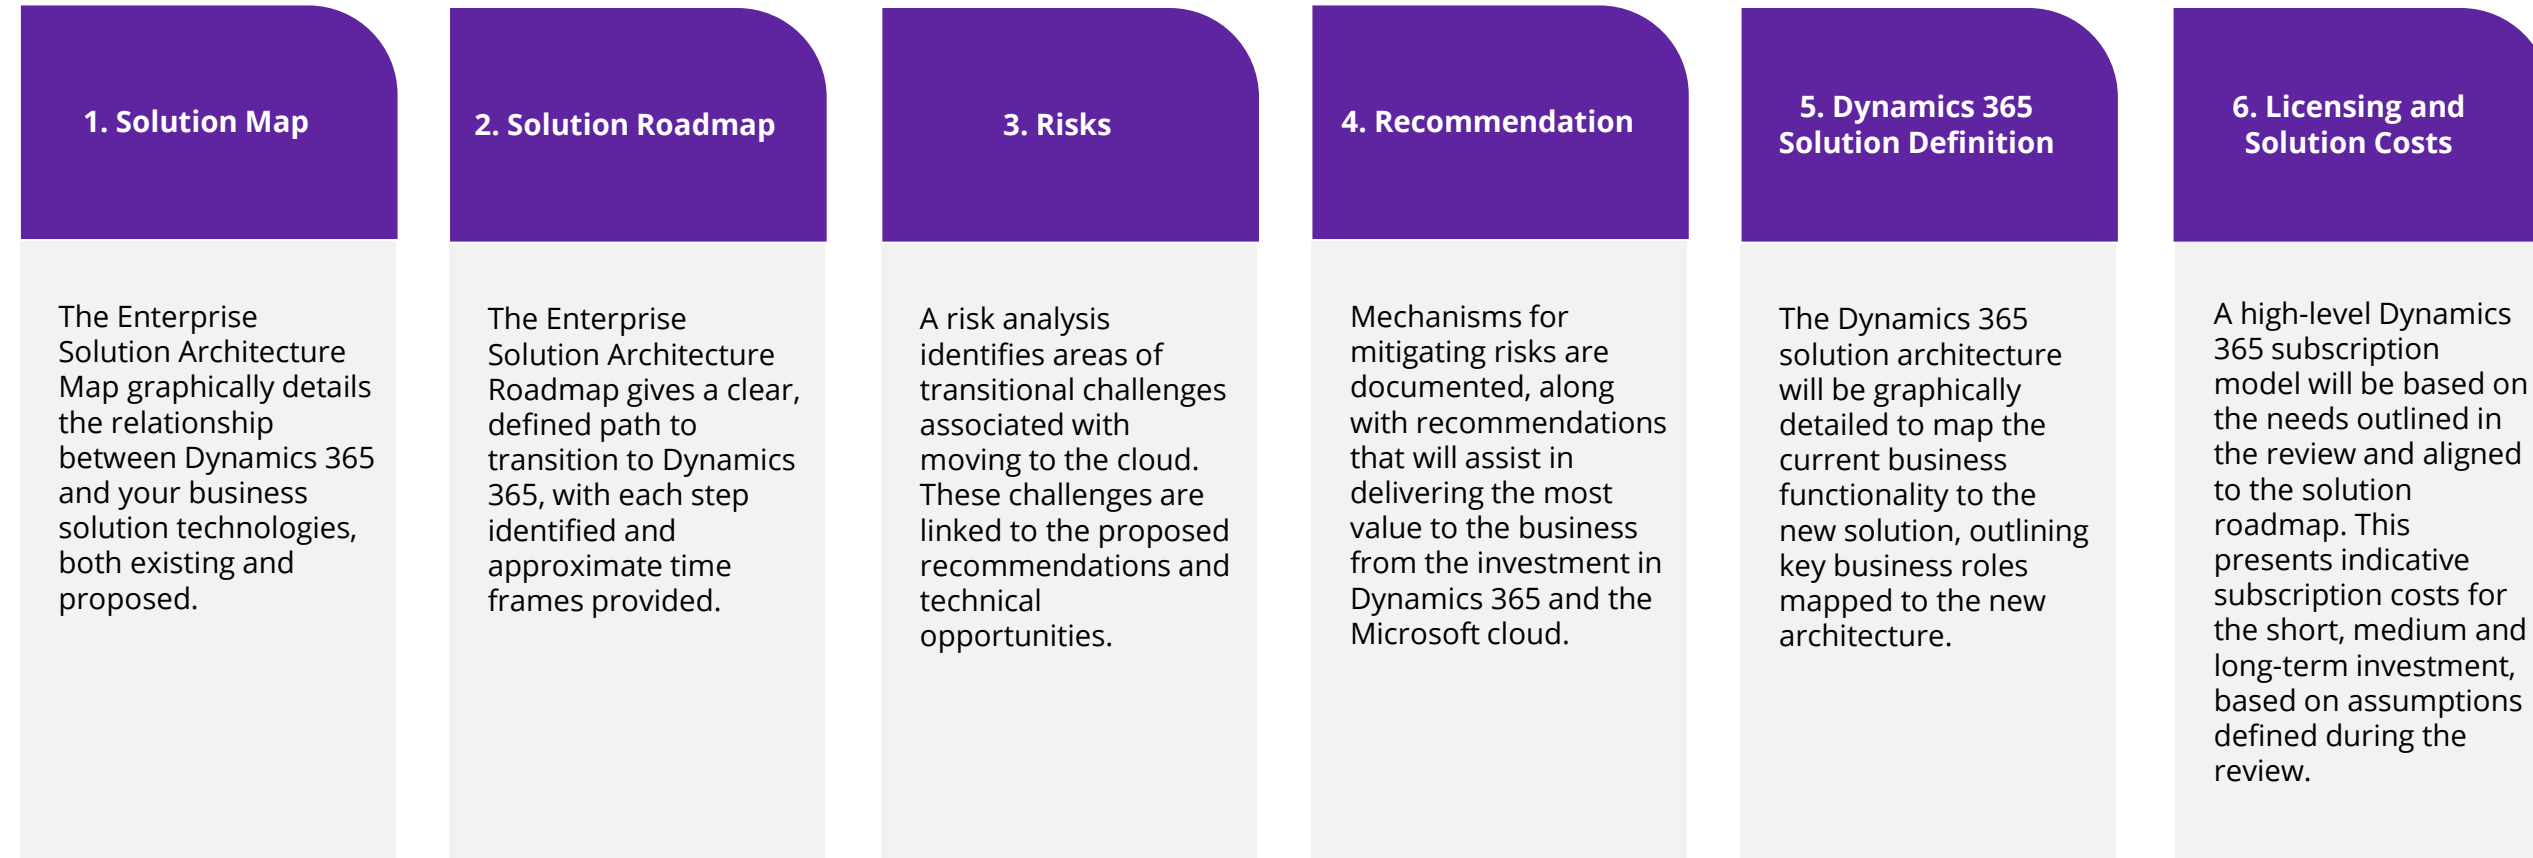

We’ll know the status of our business daily and will be able to make data-based decisions based on accurate insights. The recent work we’re doing with Microsoft and DXC is also enabling us to explore Industry 4.0 principles, which has the potential to revolutionise our business and go-to-market model.”

Pravin Singh
Chief Information Officer, tna solutions

Microsoft Dynamics 365 Readiness Review Outcomes

The Microsoft Dynamics 365 Readiness Review is built on the Open Group Architecture Framework (TOGAF).

The key objective is to assist in the optimum selection and implementation of the Dynamics 365 application within the new Microsoft cloud architecture. The review also lays the groundwork for the focus of a Pre-Implementation Analysis to be undertaken once the go-forward plan has been agreed upon and the scope defined.

- Architected Apps Solution Map
- Recommendations
- Risks and benefits

Microsoft Dynamics 365 Readiness Review Deliverables

Pre-Implementation Analysis

- Scope agreed and next steps
- Resource requirements

Ensuring success

Executive Briefing Pack

To ensure the success of the Microsoft Dynamics 365 Readiness Review, DXC provides a synopsis designed for an executive-level audience.

This high-level overview of the findings will assist the review sponsor in presenting to your executive/board.

The Executive Briefing Pack includes:

- Executive briefing document
- Executive briefing PowerPoint presentation
- Workshop with a “walk through” of the executive documentation.

DXC will help modify and present the PowerPoint to your executive/board, if required.

Next steps

The Microsoft Dynamics 365 Readiness Review provides the business, technical, operational and application alignment to position your organisation for the move to Dynamics 365.

The next step is to undertake a Pre-Implementation Analysis to deliver an agreed-upon project scope. Contact your local account manager in the DXC Practice for Microsoft for more information and to book your first step towards digital transformation with Dynamics 365 and DXC.

“We wanted to move from having all these diverse, unintegrated systems to a single system that was organically integrated by being one product and Microsoft Dynamics 365 ticked all the boxes for us.”

Naheen Mahbub
Group Financial Controller, IR

About DXC Technology

DXC Technology (NYSE: DXC) helps global companies run their mission-critical systems and operations while modernizing IT, optimizing data architectures, and ensuring security and scalability across public, private and hybrid clouds.
