Accelerate your hybrid cloud journey with DXC and Red Hat

Together we deliver open source solutions at scale — enabling application modernization, cloud and container native development and enterprise-grade container and server platforms.

DXC and Red Hat at a glance

The DXC and Red Hat partnership combines DXC's enterprise perspective and deep industry expertise with Red Hat's powerful open source solutions. DXC has a large global presence in cloud and enterprise applications and the ability to deliver digital transformation at scale. Customers benefit from the synergy provided by DXC's cloud expertise and ability to host applications in our global data centers and in public clouds such as AWS and Azure, combined with Red Hat's industry-leading open source technologies.

About Red Hat

Red Hat is the world's leading provider of enterprise open source software solutions and services, using a community-powered approach to deliver reliable and high-performing Linux, hybrid cloud, container, and Kubernetes technologies. Red Hat helps customers develop cloud-native applications, and integrate, automate, secure, and manage complex environments with award-winning support, training, and consulting services. Customer benefits

DXC Technology and Red Hat are closely aligned to build, sell and deliver managed cloud services and container platforms that provide developers and IT organizations an agile means for deploying new applications on secure, scalable resources with minimal configuration and management overhead. We do this via our precision-guided modernization and DXC Cloud Right™ approach, which modernizes and transforms applications to target environments that leverage Red Hat technologies. The benefits include:

- **Access to technology expertise.** DXC's certified Red Hat platform specialists can help enterprises integrate, deploy and run applications on multiple public, private or hybrid clouds and on Red Hat OpenShift Container Platform, on premises, on cloud and at the edge.

- **Faster time to market.** Using container technology, DXC accelerates application and infrastructure provisioning, which reduces the time for new projects and increases revenue opportunities for your IT and DevOps teams.

- **Improved service performance.** Containerization means developing new applications faster, with higher reliability and better performance. It also results in fewer errors, increased scalability and improved services in areas such as DevSecOps and business operations.

- **Reduced total cost of ownership.** DXC provides a wide range of managed application services, managed cloud services and managed container services to operate complex business solutions on a large scale. Using the latest Red Hat technologies, these services are architected for enterprise-grade high availability, and include automating application builds, testing, deployment, patching and performance reporting. This significantly reduces the overall costs of the business solutions while improving resilience and security.

- **Cost-effective licensing.** DXC offers a consumption-based subscription model for all Red Hat technologies where you pay only for the actual use of the software, without any upfront commitments. This gives maximum flexibility to adapt to usage dynamics and enables a smooth growth scenario.

Joint offerings/solutions

To help enterprises improve operational efficiencies, reduce operating expenses and transform applications, DXC and Red Hat offer innovative joint solutions, including:

500+
joint customers

5+
joint solutions

750+
engineers on the job

20+
years of partnership

About DXC Partner Ecosystem

The DXC Partner Ecosystem is a curated ecosystem of partner relationships built on a foundation of collaboration, differentiation and innovation. Together, we work to deliver the right solution and the right team to address complex, critical customer business challenges. Learn more at **dxc.com/ partnerecosystem.**

Applications modernization and DevSecOps. Modernized applications deliver immediate value, secure resilience, accelerate time to market, engage employees and customers, and enable greater agility for better business outcomes. DXC and Red Hat provide the enterprise, industry and technology expertise to deliver solutions that interconnect with your application development and management life cycles and align with your business operations.

Managed container services. Build, deploy and manage containers at scale for running container-based enterprise applications. This fully managed service for the Red Hat OpenShift Container Platform features built-in operational management that automates the building, testing, deployment and scaling of applications and keeps the container platform available and on a supported release. The solution is tailored to your specific security and regulatory requirements, integrated into your IT ecosystem, and provides container security and disaster recovery options.

Managed midrange and managed multicloud services. Build, deploy and manage on-premises servers and VMs using the Red Hat Enterprise Linux operating system. Automate tasks using Ansible.

Industry solutions. Red Hat technology is embedded in innovative DXC industry-specific solutions like Robotic Drive (autonomous driving vehicle) and Connected Car (software-defined vehicle) as well as in various industry solutions for edge devices in manufacturing, telecom and energy.

Differentiation

Through our partnership, we maintain unique resources available to our customers, including early access to Red Hat software releases. Our resources include the application transformation factory for Red Hat and the DXC Center of Expertise on Red Hat Platforms, both of which help enterprises tap into Red Hat innovations for rapid and flexible application deployment. DXC also provides training in Red Hat solutions, tools and approaches through a scalable training model that can include classroom or web-based training.

Our joint intellectual property and expertise in areas such as automation, mobility and cloud optimization enable us to develop cost-effective solutions. Together, we employ unique capabilities that deliver trusted, proven solutions at every point of your digital transformation journey.
